## Less time wasted. Less client noise. More trust.

Designlogger is a lightweight DesignOps system that helps teams show progress, protect their value, and stay focused instead of constantly explaining their work.

Why agencies love Designlogger:

- **Stop the status chasing loop**
Clients see progress clearly. No more daily "any update?" messages.
- **Proof of Work (built-in)**
Every log is a receipt of your value. No more questioning billable hours. No more "what did you do last week?" because it is documented and shareable. Every log is a receipt for your value.
- **Works where you work**
Seamlessly fits into your existing design stack and workflows (Figma, Slack, Notion).
- **Setup in minutes**
Start logging projects instantly. No heavy onboarding.

"We believe that great design deserves a great process."

Built for:

- **Small teams with big clients**
- **Agencies without a dedicated PM**
- **Founders juggling design and delivery**

What you can track:

- **What clients see**
- **What your team logs once**
- **What you never need to explain again**

How it works →

| Create a project and define phases (ID, UX, CMF, Research) | → | Log progress with tasks, worklogs, and deliverables | → | Share a clean client view and reduce status calls |

The result → More trust. Cleaner communication. Faster projects.

Clients don't trust what they can't see. Designlogger fixes that. is easy to manage, easy to explain, and impossible to ignore.
